

Course Resource Hub – Daily Learning Guide

This document serves as the central location for all course materials and should be used as your primary reference throughout the program.

Inside this guide, you will find:

- **Daily Work Links** – Access the notebooks, datasets, presentations, and resources required for each session.
- **Study Guides** – Detailed notes and summaries covering the concepts taught during class.
- **Daily Assignments** – Practice exercises and homework designed to reinforce your understanding and help you apply what you have learned.

Please review this document regularly and complete the assigned tasks for each day before the next session. Keeping up with the daily work and assignments will ensure a smooth learning experience and help you build a strong foundation in Machine Learning and Data Science.

Recommended Workflow:

1. Attend the session and follow along with the class activities.
2. Review the Study Guide after class.
3. Complete the Daily Assignment.
4. Use the provided links and resources for additional practice and revision.

This document will be updated throughout the course, so be sure to bookmark it and check back frequently for new materials and announcements.

1. Datasets Repository

Google Drive Link

https://drive.google.com/drive/folders/1B8cAKPA85kH1s9XiyA_Sh2ZlfrP7LKRO?usp=sharing

This repository contains all datasets required for the Machine learning module with practical exercises and case studies.

Day 1 – Simple Linear Regression

Topics Covered: Introduction to Machine Learning, Supervised Learning, and Simple Linear Regression

Resource Link:

<https://docs.google.com/document/d/1PqfaELb5MktR0PAZW80IIGLUXtg6G2lvK684jDyDpz0/edit?usp=sharing>

Day 2 – Multiple Linear Regression

Topics Covered: Using multiple features, coefficients, feature importance, R^2 , MAE, and RMSE

Resource Link:

https://docs.google.com/document/d/1z7avAs0d_qJjpYaGgdtSFuc6EOuG4eyPhFBUcfZWI4g/edit?usp=sharing

Day 3 – Advanced Regression Concepts

Topics Covered: Advanced model analysis, evaluation, and practical implementation

Resource Link:
