

Python Practice Assignment – Loops, Lists & User Input

Instructions

- Complete all questions using Python.
 - Write clean and readable code.
 - Add comments wherever necessary.
 - Try solving the questions on your own before looking at the hints.
 - Submit a single Python file containing all solutions.
-

Question 1: Personal Introduction Repeater

Create variables for:

- Your Name
- Your Age
- Your College Name

Print these details 10 times using a loop.

Hint:

- Use a `for` loop.
 - Use `range()` to repeat the output multiple times.
-

Question 2: Welcome to Glowlogics

Create a list containing at least 5 student names.

Print the following message for every student:

"Welcome to the Glowlogics Internship Program."

Hint:

- Store names inside a list.
 - Loop through the list using a `for` loop.
-

Question 3: Digital Greeting System

Create a list of 10 student names.

Send a personalized greeting to each student.

Example:

Dear Sai,

We are excited to have you as part of the internship.

Regards,
Glowlogics

Hint:

- Use a loop.
 - Use the student's name inside the message.
-

Question 4: Even Number Challenge

Print all even numbers from 1 to 100.

Hint:

- Use `range()`.
- Remember that even numbers are divisible by 2.

Bonus:

Print odd numbers from 1 to 100.

Question 5: Attendance Register

Create a list of at least 6 students.

Print:

- Present

for every student.

Hint:

- Store student names in a list.
 - Use a loop to display attendance.
-

Question 6: Secure Login System

Create a password:

Glow123

Keep asking the user to enter the password until they enter the correct one.

When the correct password is entered, display:

"Access Granted"

Hint:

- Use a `while` loop.
 - Continue asking until the entered password matches the correct password.
-

Question 7: Multiplication Table Generator

Ask the user to enter a number.

Print the multiplication table up to 10.

Example:

Input: 5

Output:

5 x 1 = 5

5 x 2 = 10

...

5 x 10 = 50

Hint:

- Use `input()`.
 - Convert the input into an integer.
 - Use a loop from 1 to 10.
-

Question 8: Amazon Order Confirmation

Create a list of customer names.

Generate an order confirmation message for every customer.

Example:

Hello Sai,

Your order has been successfully placed.

Thank you for shopping with us.

Hint:

- Use a list.
- Use a loop to generate messages automatically.

Question 9: Countdown Timer

Print numbers from 10 to 1.

After reaching 1, print:

"Launch Successful!"

Hint:

- Use `range()` with a negative step value.
-

Question 10: Student Information Collector

Ask the user for:

- Name
- Age
- College Name

Display all details in a formatted manner.

Example:

Student Details

Name: Sai

Age: 20

College: XYZ College

Hint:

- Use `input()`.
- Use f-strings for clean formatting.

Bonus Challenge 1

Create a list of your favorite movies.

Print each movie on a separate line.

Hint:

- Store movie names inside a list.
- Loop through the list.

Bonus Challenge 2

Ask the user to enter a number.

Print whether the number is:

- Even
- Odd

Hint:

- Use the modulus operator `%`.
- Check if the remainder after division by 2 is zero.

Bonus Challenge 3

Create a simple ATM PIN system.

Correct PIN = 1234

Allow the user a maximum of 3 attempts.

If the PIN is correct:

"Transaction Allowed"

Otherwise:

"Card Blocked"

Hint:

- Use a counter variable.
 - Use a `while` loop.
 - Increase the counter after every wrong attempt.
-

Submission Checklist

- ✓ Used loops wherever required
 - ✓ Used lists correctly
 - ✓ Used meaningful variable names
 - ✓ Added comments
 - ✓ Tested the program before submission
-

Remember: Programming is learned by writing code, making mistakes, fixing them, and trying again. Every problem you solve today strengthens your logic-building skills and prepares you for larger projects in the future.
